# Semester Credit Planner — standalone prototype

20-university sortable matrix and credit/degree model. Data is mixed-year and includes unknowns. Credit estimates are not official awards. Previous transfer-policy form is not included; no institutional-policy rules are activated here.

### Local preview

Requires Python 3. Unzip, open this directory in a terminal:

```
python3 -m http.server 8080 --bind 127.0.0.1
```

Open http://127.0.0.1:8080/ . On Windows use `py -m http.server 8080 --bind 127.0.0.1`. Serve via HTTP: ES modules and JSON fetch may not work under file://.

### Tests

Node 18+:

```
npm test
```

No npm install needed; no dependencies. No license granted by this package; choose a license before public distribution.

### GitHub

No remote repository was created. To publish after reviewing privacy and license:

```
git init
git add .
git commit -m "Add international credit planner prototype"
```

Create/select a remote and push only after approval.

### Integration

Overlay files under `app/public/credit-planner/` in Semester. This is a proposed static prototype mount, not a new authenticated Semester screen. Do not link it from production navigation until design, accessibility and policy review. No main-branch merge or deployment performed. Confirm local package scripts rather than assuming a dev command.
