Build a 16-week STAR grading rubric spreadsheet — score situation depth, task ownership, action verbs, and quantified impact with weighted point scales

Computer
Handshake & Big Interview integration planner: map mock-interview workflows, rubric criteria, and weekly student submission tracking in one dashboard
Computer
Show me the 16-week CS curriculum breakdown
How do students submit Big Interview evidence in Handshake
Give me the CSV template for the STAR grading rubric
Semester intelgense also should help grade for teachers outline that to

Created the **spreadsheet** and two CSV templates: a 16-week STAR grading workbook with a dashboard, a student-score entry CSV, and a rubric-criteria CSV.

Students generally should submit their interview assignment in Big Interview, then share permitted evidence with their coach through the institution's approved process. Handshake is not a universal Big Interview assignment-submission portal: its document, appointment, and Experience workflows have different purposes and permissions. Big Interview also distinguishes assignment recordings from ordinary practice recordings.[1]

1. What the workbook includes

Sheet	Purpose
Read Me	Instructions, assessment boundaries, and privacy reminders
Rubric	Four weighted dimensions with 0–4 performance anchors
STAR Grades	Sixteen weekly grading rows, quotations, claim status, feedback, and approval
Weekly Tracker	Assignments, Big Interview evidence, coach milestones, appointment status, and submissions
Dashboard	Submission counts, appointment states, attendance verification, final rubric approvals, and average approved score
Sources	Vendor instructions and AI-governance source links

The template contains no real student records, completed appointments, or fabricated vendor assignment identifiers.

Spreadsheet behavior

- Scores are validated within 0–4.
- Weighted totals remain blank until all four scores are entered.
- AI-provisional evaluations stay distinct from final-approved evaluations.
- Appointment completion and attendance verification have separate fields.
- The dashboard's average uses final-approved evaluations only.
- Dropdowns support submission, appointment, and review states.

The workbook was generated and verified as non-empty. Formulas are included for spreadsheet software to calculate; they were not evaluated in Excel during generation. This is an editable planning and grading dashboard, not a live vendor integration.

2. STAR grading rubric and CSV templates

Weighted point scale

Dimension	Weight	Full-score expectation
Situation depth	20%	Relevant, concise context explaining the challenge, stakes, and constraints
Task ownership	25%	Specific personal responsibility, boundaries, and distinction from team work
Action specificity	35%	Concrete personal steps, meaningful action verbs, reasoning, tradeoffs, and collaboration
Result quality	20%	Grounded impact, defensible measurement or qualitative evidence, attribution, limitations, and learning

Each dimension receives 0–4:

- 0: no assessable content.
- 1: vague or substantially incomplete.
- 2: partly developed.
- 3: clear and specific.
- 4: clear, specific, and appropriately nuanced.

The score is:

$$\text{Total} = 20\frac{S}{4} + 25\frac{T}{4} + 35\frac{A}{4} + 20\frac{R}{4}$$

These are proposed educational weights, not a validated hiring assessment.

Quantified impact: reward defensibility, not numbers alone

Full credit can come from:

- A measured performance improvement with a stated measurement basis.
- A documented bug fix and regression test.
- A completed deliverable accepted by the team.
- A well-explained unsuccessful outcome with learning and limitations.

“Improved performance by 40%” should not earn extra credit unless the student explains what was measured and how. Likewise, “implemented,” “optimized,” and “led” are not evidence unless the response identifies the actual work.

CSV deliverables

The student-score CSV provides sixteen blank weekly rows with fields for:

- Learner key, week, and story ID.
- Four dimension scores.
- Weighted total.
- Reviewer type and review state.
- Claim status.
- Supporting quotations.
- Metric basis or qualitative outcome.
- Feedback, retry reference, and final approver.

The rubric CSV provides the dimension weights and all five scoring anchors.

Use the XLSX for automatic calculations. The CSV is an import template: it does not carry the workbook’s dropdowns, linked-sheet formulas, or dashboard behavior.

3. How students submit Big Interview evidence in Handshake

Step 1: complete the correct Big Interview assignment

If the instructor assigned a mock interview, the student must complete that assignment through its actual code or invitation. A practice recording may not count toward an assigned submission. [1]

Step 2: share a recording only when permitted

In Big Interview:

1. Open Practice → My Videos.
2. Locate the relevant practice or assignment recording.
3. Select the recording and the available sharing action.

4. Share by email or copy its link.
5. Confirm that the intended reviewer can access it. [2] [3]

Assignment recordings can be shared externally only if the instructor enabled External Sharing. Big Interview also documents a Make Private control for revoking shared access. [3]

Recipients may be able to view and provide feedback without a Big Interview account, so treat the link as sensitive—not as a harmless public URL. [2]

Big Interview's FAQ says responses cannot be downloaded directly to a computer. Plan around approved links or a student-created evidence summary rather than promising a video-file export. [1]

Step 3: use the correct Handshake workflow

Handshake route	Appropriate use	Important limitation
Career-center appointment	Arrange a coach review and follow the office's sharing instructions	Do not assume students have an appointment-file upload control
My Documents	Upload an approved PDF or document summary when requested	Uploading does not automatically submit it to a coach or mark a curriculum assignment complete
Experiences attachment	Attach evidence to an actual institution-approved Experience workflow	Do not create a fictitious Experience merely to store interview recordings
Career-staff appointment notes	Staff may attach files or record review information	This is a staff-side workflow, not proof of a student upload capability

Handshake's appointment-details documentation describes notes and file attachments for career staff. Its student document instructions support PDF, DOC, and DOCX uploads of 1 MB or less. [4] [5]

For an existing Experience, the student can open Career Center → Experiences → View Details → New Attachment, name the document, choose the file, and create the attachment. Approvers and Career Services reviewers can access and download that document. [6]

Recommended evidence packet

Use a short PDF or document containing:

- Student and course identifiers required by the institution.
- Week and assignment label.
- Big Interview assignment reference.
- A permitted share link, if available.
- A short self-reflection.
- Two questions for the coach.
- Sharing restrictions.

Avoid putting private recordings into employer-facing application documents. If external sharing is disabled, record completion through an approved instructor review or attestation—not by bypassing the restriction.

4. The 16-week CS curriculum breakdown

The workbook maps these proposed weekly assignments to vendor and coach milestones.

Week	CS and behavioral assignment	Big Interview milestone	Handshake / coaching milestone
1	Baseline teamwork story; pair-sum solution, tests, and explanation	Fast Track foundations and baseline practice	Check Career Center access
2	Hash-map frequency counting; task-ownership story	Interview Prep and Answer Builder	Request initial review if needed
3	Balanced-delimiter checker; problem-solving story	Behavioral lessons and story revision	Check confirmation and prepare materials
4	Debug a seeded defect; technical mini-mock; conflict story	Assignment A: foundation	Plan week-8 mock
5	Clarify actions in three stories; explain personal decisions	Assignment B: actions and follow-ups	Prepare coaching goals
6	Setback story; audit metrics and qualitative results	Revise results in Answer Builder	Request or confirm mock I
7	Targeted résumé; three evidence links; project explanation	Resume Curriculum, if licensed	Share approved materials
8	Human behavioral mock; two focused retries	Pre-mock rehearsal	Complete mock I
9	Leadership and prioritization stories; coverage map	Assignment C: behavioral range	Review additional support needs
10	Employer briefing; motivation answer; interviewer questions	Preparation and common-question lessons	Request mock II
11	Role-specific coding, debugging, or design practice	Relevant practice set or playbook	Prepare specialist questions
12	Mixed mock; ambiguity, reasoning, and follow-ups	Assignment D: mixed interview	Complete mock II
13	Six-question simulation; revise two responses	Assignment E: full simulation	Request final mock
14	Format rehearsal; technology and accessibility checks	Relevant format lessons	Confirm final appointment
15	Final role-specific mock; résumé consistency audit	Targeted weak-area practice	Complete mock III
16	Preparation packet; baseline comparison; next-month plan	Review submissions and reflection	Optional follow-up advising

Big Interview's documented curriculum includes Fast Track, Written Curriculum, Resume Curriculum, and Interview Playbooks. Exact availability and navigation must be verified for the institutional account.[7]

Assignment A–E are proposed Semester labels. They are not real vendor codes.

Week 1–4 technical expectations

Week	Primary technical skill	Required evidence
1	Clarifying requirements and explaining a baseline approach	Code or approved pseudocode, edge-case tests, complexity explanation
2	Selecting a hash map and stating assumptions	Input/output contract, implementation, tests, tradeoff explanation
3	Explaining stack behavior and malformed inputs	Correctness reasoning, nesting tests, complexity and limitations
4	Reproducing and correcting a defect	Failing example, root cause, bounded fix, regression test

Use a separate technical rubric: requirements 15%, approach 20%, correctness 25%, testing/debugging 20%, complexity 10%, and communication/reflection 10%.

Do not let a strong behavioral story compensate for incorrect code, or a correct solution compensate for inaccurate claims about personal contribution.

5. One-dashboard integration design

Semester should track three separate streams.

Submission stream

```
Not started → In progress → Submitted → Returned → Accepted
```

“Alternative arranged” is available when access, accessibility, or staffing requires another route.

Appointment stream

```
Not requested → Requested → Approved
→ Completed / Declined / No show / Alternative arranged
```

Assessment stream

```
Not started → AI provisional → Human review
→ Final approved / Appealed
```

The dashboard should answer:

- What does the student owe this week?
- Where is the submission evidence?
- Has a coach appointment been confirmed?

- What rubric version was used?
- Is the score provisional or final?
- What requires attention?
- Which information is student-attested versus source-confirmed?

Actual vendor synchronization requires authorized access, verified interfaces, data-sharing terms, reconciliation, and institution approval. The delivered workbook does not establish those integrations.

6. Semester Intelligence as a teacher grading assistant

Semester Intelligence should help teachers prepare assessments, inspect evidence, draft criterion-level feedback, and manage review queues. It should not become an unaccountable final grader.

UNESCO's AI-in-education guidance emphasizes inclusion, equity, risks, and appropriate educational governance. These principles support a human-controlled assessment design rather than automatic high-stakes decisions.[8]

A. Before students submit: assessment setup

The teacher defines:

- Learning objectives.
- Rubric dimensions, weights, and anchors.
- Accepted submission formats.
- Reference solutions or exemplar work.
- Permitted AI assistance.
- Late-work and revision policies.
- Accessible alternatives.
- Conditions requiring manual review.
- Who can approve and publish grades.

Semester can flag ambiguous rubric language or conflicting weights. The teacher approves the assessment version before use.

B. After submission: evidence-grounded assistance

For each criterion, Intelligence should provide:

```
Proposed score
Relevant submission quotation, code span, or artifact reference
Reasoning tied to the rubric
Missing or contradictory evidence
Uncertainty or inability to assess
```

```
Suggested student feedback
Human review requirement
```

The teacher should be able to accept, edit, reject, or request a second review criterion by criterion.

C. Different work needs different evaluators

Work type	Useful assistance	Required boundary
STAR responses	Structure, ownership, specificity, outcome clarity	Do not infer honesty or employability
Code	Tests, failure cases, code explanation, rubric mapping	Passing tests alone does not prove understanding
Essays	Argument structure, evidence use, rubric-based comments	Do not mistake writing style for mastery
Projects	Deliverable coverage and contribution mapping	Team output does not establish individual ownership
Portfolios	Provenance, attribution, claim consistency	Linking an artifact does not verify every associated skill
Short answers	Comparison against approved criteria	Ambiguous or alternative correct answers need review

Student submissions are untrusted content. Instructions inside a document or code comment must not alter the evaluator's rubric, tools, or permissions.

D. Teacher review workspace

Provide:

- Submission beside rubric and evidence.
- Criterion-level AI suggestions.
- Teacher edits and rationale.
- Missing-evidence indicators.
- Comparable approved exemplars.
- Review queue for uncertain cases.
- Version history.
- Regrade and appeal workflow.
- Publish preview.
- Authorized gradebook write controls.

Do not force grades into a target distribution. Cohort analysis can surface inconsistent scoring, but should not automatically curve individual grades.

E. Hard boundaries

- Official grades require the approved human assessment process.
- AI does not make academic-integrity findings.
- Automated AI-authorship detection is not proof of misconduct.
- Sensitive student information is excluded unless specifically necessary and authorized.
- Accommodation decisions stay with authorized humans.
- Private practice is separate from graded submissions.
- Student work cannot be sent to an unapproved provider.
- Grade changes require authorization, auditability, and a correction path.

F. Publication and gradebook integration

Proposed workflow:

```
Submission received
→ authorized evaluation
→ provisional feedback
→ teacher review
→ approval
→ publication preview
→ authorized gradebook write
→ reconciliation
→ student access and appeal
```

Keep feedback drafting separate from official-record updates. An AI suggestion is not a posted grade.

7. Activation requirements

Capability	Accountable owner	Required evidence
Curriculum and rubric	Career education lead	Reviewed objectives, anchors, alternatives, appeal policy
CS exercises	CS educator	Tested reference solutions and specialist review
AI assessment	AI lead and teaching specialists	Agreement analysis, evidence grounding, failure handling
Vendor integration	Integration owner	Licensed access and verified permitted workflows
Privacy and sharing	Security/privacy lead	Tenant isolation, storage access, revocation, retention tests
Gradebook publication	Academic systems owner	Authorized writes, audit, reconciliation, correction process
Production activation	Institutional implementation lead	Explicit authorization, monitoring, support, rollback

The proposed design extends Semester's existing career screen and career handoff—applications, preparation, evidence, portfolios, and human support—without treating design artifacts as proof of implementation.[9] [10]
